

V-Mate Recording Format Codes

For recording compatible files for various Video Playback Devices with V-Mate
(based on Firmware v.02.07.ww.b4 & b8)

Document version 20080128

Instructions:

1. Check if your playback device is not listed as a selectable device in the V-Mate user interface under Settings > Recording Format. If listed, select the device and you are set. If not listed, go to step 2.

2. Look up your device in this list and make a note of the 12 digit Recording Format Code. If your device is not listed here, try the various manual setting options in the V-Mate user interface to find the right combination that works for your device.

3. From V-Mate's main menu go to Settings > Recording Format > Recording Format Code and type in the code by using the arrow keys. Now V-Mate has adjusted the video settings to record in a compatible format.
